Case No. 5635-1 Express Mail Label: EV 229673423 US

## **CLAIMS:**

5

10

- 1. A method of forming a pile fabric of continuous filament non-textured yarn, the method comprising the steps of:
  - (a) providing a continuous filament non-textured yarn,
- (b) heating and drawing simultaneously said continuous filament non-textured yarn to pre-stress said yarn;
  - (c) providing a base portion,
- (d) forming said continuous filament non-textured yarn, which has been pre-stressed, into a plurality of tufts upon said base portion such that said tufts and said base portion define a fabric, and
  - (e) heating said fabric, thereby providing a bulked pile fabric.
- 2. The method of claim 1 wherein said drawing step comprises underdrawing said yarn.
- 3. The method of claim 1 wherein said heating and drawing step (b) is accomplished at a temperature of greater than about 150 degrees C.
- 4. The method of claim 1 wherein said heating and drawing step (b) is accomplished at a temperature of greater than about 180 degrees C.
- 5. The method of claim 1 wherein said heating and drawing step (b) is accomplished at a temperature of greater than about 200 degrees C.

USPTO Customer No. 25280 Case No. 5635-1 Inventor(s): Keller et al. Express Mail Label: EV 229673423 US

6. The method of claim 1 wherein said heating and drawing step (b) is accomplished at a temperature of about 215 degrees C or greater.

- 7. The method of claim 1 wherein said heating and drawing step (b) is conducted by employing a heating time of no greater than about 0.063 seconds.
- 8. The method of claim 1 wherein said heating and drawing step (b) is conducted by employing a heating time of no greater than about 0.056 seconds.
- 9. The method of claim 1 wherein said heating and drawing step (b) is conducted by employing a heating time of no greater than about 0.052 seconds.
- 10. The method of claim 1 wherein said heating and drawing step (b) is conducted by employing a heating time of no greater than about 0.047 seconds.
- 11. A method of forming a pile fabric, the method comprising the steps of:(a) providing a continuous filament non-textured yarn;

USPTO Customer No. 25280 Inventor(s): Keller et al.

- (b) simultaneously (i) heating said yarn at greater than about 100 degrees Centigrade, and (ii) underdrawing said continuous filament non-textured yarn, thereby pre-stressing said yarn;
- (c) providing a base portion;
- (d) forming said pre-stressed continuous filament non-textured yarn into a plurality of tufts upon said base portion such that said tufts and said base portion define a fabric structure; and
- (e) heating said fabric structure.
- 12. The method of claim 11 wherein said heating time/ drawing time in step(b) is no greater than about 0.063 seconds.
- 13. The method of claim 11 wherein said heating/drawing time in step (b) is no greater than about 0.052 seconds.
- 14. A method of forming a pile fabric, the method comprising the steps of:
  - (a) providing a continuous filament non-textured yarn;
  - (b) simultaneously (i) heating said yarn at a a temperature of at least about 200 degrees Centigrade, and (ii) drawing said continuous filament non-textured yarn at a draw ratio of greater than about 1.0 by employing a heating/ drawing contact time of no greater than about 0.063 seconds;
  - (c) providing a base portion;

10

- (d) forming said continuous filament non-textured yarn into a plurality of tufts upon said base portion such that said tufts and said base portion define a fabric structure; and
- (e) heating said fabric structure.
- 15. The method of claim 14 wherein said heating/drawing contact time is no greater than about 0.056 seconds.
- 16. The method of claim 14 wherein said heating/drawing contact time is no greater than about 0.052 seconds.
- 17. The method of claim 14 wherein said fabric structure produced in step(e) provides an average void area between said tufts of less than about 0.41 square millimeters.
- 18. The method of claim 17 wherein said average void area is between about 0.21 and about 0.41 square millimeters.
- 19. The method of claim 17 wherein said average void area is between about 0.21 and about 0.35 square millimeters.
- 5 20. The method of claim 17 wherein said average void area is about 0.35 square millimeters or less.
